Significant Devices

Our strength lies in complex mechatronic and electronic equipment. We develop significant medical devices for the life science industry, based on the latest technology.

Electrophysiology

We create various measurement and control systems, from analogue signal to digital processing.

Heatina

We make temperature-controlled systems. These can be used for oncology and point-of-care tests.

Printed electronics

We develop and integrate screen printed sensors and antenna technology. Applicable for several uses in the medical market. Flexible and biocompatible devices.

Optics

We produce optical systems in our own cleanroom, with special simulation techniques

Ventilation We provide full-service design of ventilation systems for operating theatres and intensive care units.

High-quality instruments

Doctors need high quality instruments to help patients both efficiently and effectively. That's why we provide optimal support for research, cure and care. We develop medical products of great significance based on the latest technology.

We work in the following areas: anaesthesia and respiration, blood, cardiology, diagnostic imaging, fluid management, hand-held devices, IVD, infection control, neurology, oncology, ophthalmology, patient monitoring, surgical devices, instruments and accessories, urology, wound management and wearables.

unitron Crea' life-science devices

From design to prototype and from certification to series production. We have been creating medical devices for global players for more than 30 years. Together, we're taking healthcare to the next level.

From concept to realisation. We develop life science products that matter.

Our customers are global players who like to challenge the healthcare status auo.

As an innovative development partner, we take their products to the next phase. We can take care of the entire production process or offer advice on particular aspects. We're raising the bar every day. Together, we're achieving breakthroughs in the areas of technology, quality and cost efficiency.

You can contact us for support in a variety of different areas. Product development, regulation and certification, design transfer, production and service. Do you have a design that needs to be certified? Or would you like to outsource the entire production process? We are highly committed partner and do everything we can to ensure the optimal result.

Unitron is ISO13485 certified and a FDA registered facility.

We know and understand the stringent medical regulations inside out. As experts in technical documentation, life-cycle management and product certification, we can guarantee that your product meets all the requirements.

Product development

We develop feasible and innovative products, ensuring that they can be successfully introduced on the market.

Between design and production lies design transfer: transferring the product design to the production process. We pay great attention to this important step. This allows us to guarantee a smooth and stable production process.

Service Following production, we can offer a comprehensive service. Direct shipping, logistics, calibration, maintenance, repairs and more. We aim for the longest possible service life and the highest possible quality for each product.

Production

Our production process is intelligent and scalable. We work on the principle of maximum flexibility and minimum use of resources. Each year, we produce more than 250 different products, varying from one-off items to mass production articles.
